

RENOVERTY

RENOVERTY fosters energy efficiency building upgrades in the energy-poor households of Central-Eastern, South-Eastern and Southern European countries by establishing the methodological and practical framework to build renovation roadmaps for vulnerable rural districts in a financially viable and socially just manner.

Home Renovation Roadmaps to Address Energy Poverty in Vulnerable Rural Districts

Objectives

To address these challenges, **RENOVERTY** aims to:

Promote the **renovation of rural vulnerable districts** and set the basis for the increase of energy efficiency in **17 vulnerable rural areas in 7 regions** by providing individual household Renovation Energy Efficiency Roadmaps (REERs) according to the characteristics of the household and regions with the collaboration of 12 Local Action Groups (LAGs).

Provide a **comprehensive model and guidelines** for single REERs according to the different geographical and social contexts to scale results and guide other public actors to renovate rural vulnerable districts after the project ends.

Empower all (non) public actors in rural areas in becoming involved in the process of renovating vulnerable districts/buildings by identifying barriers and co-designing activities with the collaboration of private and public sectors.

Approach

RENOVERTY will incorporate security, comfort, and improved accessibility in the roadmaps to further improve the quality of life of vulnerable populations. Over the project's three years, the roadmaps will be implemented by **seven pilots**, while wider integration of rural and peri-urban development is foreseen in the long run.

Croatia | Estonia | Hungary | Slovenia
Italy | Portugal | Spain

Challenges

Rural residents are facing three main energy poverty challenges:

- Building stock and infrastructure issues.
- Socio-economic inequality.
- Limited public participation and representation in labour market.
